1. Applicant's election without traverse of Figs. 7A-7B and 9 with claims 1-11 readable thereon in the reply filed on 8/29/05 is acknowledged.

Claims 3 - 4 and 7-11 withdrawn from consideration since they read on non-elected Species II Figs. 8 and 9 not elected Figs. 7A-7B and 9. For example, fin 61 in Figs. 7A-7B is not spaced from chip 11 by a predetermined space as claimed in claims 3 and 7 and fin 61 in Figs. 7A-7B has no bottom portion having at least one opening for the encapsulant to fill as claimed in claims 8 and 10.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 and 5-6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hsu et al.

Hsu et al teaches an IC package (Figs. 4.1-5.3) having an encapsulant 5 having a PCB side (the side where substrate 1 with balls 6 would be mounted on a PCB), chip 2 inside the encapsulant 5 and a heat dissipation fin (broad term) 82 or 82' implanted in 5 directly contacting chip 2 and having a metal portion 8 or 8' thereof extending outside the open side of 5 (side where 82 and 82' would enter into the encapsulant 5). The fin 82 or 82' is implanted into encapsulant 5 before the encapsulant is cured at a predetermined position with the fin 82 or 82' above chip 2 with the encapsulant 5 and

fin 82 or 82' held in position (broad term) by gravity for example before the encapsulant 5 is cured.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rostoker et al and Mostafazadeh et al teach packages.
